

Photovoltaic systems

D20 APSAD standard eBook

Details

Publications :	February 2013
Page count :	29
Format :	Digital Edition
ISBN :	eBook 978-2-35505-203-3
Ref :	PDFREF020A

Presentation

The development of renewable energies raises concerns about the potential risks of photovoltaic installations, in particular the risk of fire.

The purpose of D20 APSAD standard is to support users, specifiers and installers in managing projects involving the installation of photovoltaic systems on roofing. It compiles the provisions concerning the design, installation and maintenance that should be emulated for these systems, in order not to aggravate the risk of fire and ensure accessibility for interventions by fire-fighters or maintenance services.

The Ebook is a protected file that should only be read with the free [Adobe Digital Edition](#) software.

We advise you to download the software and check it is correctly installed on your computer before making any purchase.
