## Presentation

Everyone knows that in a fire, smoke kills long before the flames do.

Through three short modules, this new film recalls why smoke is dangerous, how to behave when a fire breaks out, what appliances help to clear and evacuate smoke, and the physico-chemical characteristics of smoke.

- **DOMESTIC FIRES** : Interviews with victims, fiction, reconstructions show the importance of properly reacting right from the start of a fire, and the value of smoke detectors in the first module.
- **FIRE IN THE FIRM** : The second module presents the smoke extraction appliances that help to ensure the safety of people in the company.
- **“UP IN SMOKE!”** : Why is smoke so dangerous? What consequences can it have? These are the main questions addressed by the third module.

*This is a demo video whose image is compressed and encoded with mentions and a translucent logo. It can not be used in training . This video is available provided that your network administrator has given you the rights . Our products for sale are excellent sound and visual quality.*

**Target public :**
