

Sandwich panels and fire behaviour

D14-A APSAD standard eBook

Details

Publications :	June 2009
Page count :	34
Format :	Digital Edition
ISBN :	eBook 978-2-35505-208-8
Ref :	PDFREF14AA

Presentation

The purpose of D14-A APSAD standard is to support users (business managers, builders, etc.) and specifiers (design and engineering offices, insurance companies, etc.) in their fire prevention approaches. It defines the fire behaviour of sandwich panels, which are often used in food warehouses or workshops, laboratories and buildings at cold ambient temperatures. The choice of quality panels associated with compliance with construction requirements can limit fire ignition and delay the progress of combustion.

The document sets out recommendations for the design, fire behaviour and implementation of these panels, including the assembly, mounting and installation of associated electrical systems, lighting, etc.

The Ebook is a protected file that should only be read with the free Adobe Digital Edition software.

We advise you to download the software and check it is correctly installed on your computer before making any purchase.
